At least Windows Server 2003 operating systems or Windows XP Professional

Options:

Help:

This policy setting determines whether Group Policy processing is synchronous (that is, whether computers wait for the network to be fully initialized during computer startup and user logon). By default, on client computers, Group Policy processing is not synchronous; client computers typically do not wait for the network to be fully initialized at startup and logon. Existing users are logged on using cached credentials, which results in shorter logon times. Group Policy is applied in the background after the network becomes available.

Note that because this is a background refresh, extensions such as Software Installation and Folder Redirection take two logons to apply changes. To be able to operate safely, these extensions require that no users be logged on. Therefore, they must be processed in the foreground before users are actively using the computer. In addition, changes that are made to the user object, such as adding a roaming profile path, home directory, or user object logon script, may take up to two logons to be detected.

If a user with a roaming profile, home directory, or user object logon script logs on to a computer, computers always wait for

Windows Server 2012 R2, Windows 8.1, Windows RT 8.1, Windows Server 2008, Windows Server 2003, Windows 7, Windows Vista, Windows XP Professional Service Pack 1 and Windows 2000 Service Pack 3

Options:

Help:

This policy setting allows you to remove the Default Programs link from the Start menu.

If you enable this policy setting, the Default Programs link is removed from the Start menu.

Clicking the Default Programs link from the Start menu opens the Default Programs control panel and provides administrators the ability to specify default programs for certain activities, such as Web browsing or sending e-mail, as well as which programs are accessible from the Start menu, desktop, and other locations.

If you disable or do not configure this policy setting, the Default Programs link is available from the Start menu.

Note: This policy setting does not prevent the Set Default Programs for This Computer option from appearing in the Default Programs control panel.

Windows Server 2008, Windows Server 2003, Windows 7, Windows Vista, Windows XP, and Windows 2000

Options:

Help:

This policy setting allows you to remove the Documents icon from the Start menu and its submenus.

If you enable this policy setting, the Documents icon is removed from the Start menu and its submenus. Enabling this policy setting only removes the icon. It does not prevent the user from using other methods to gain access to the contents of the Documents folder.

Note: To make changes to this policy setting effective, you must log off and then log on.

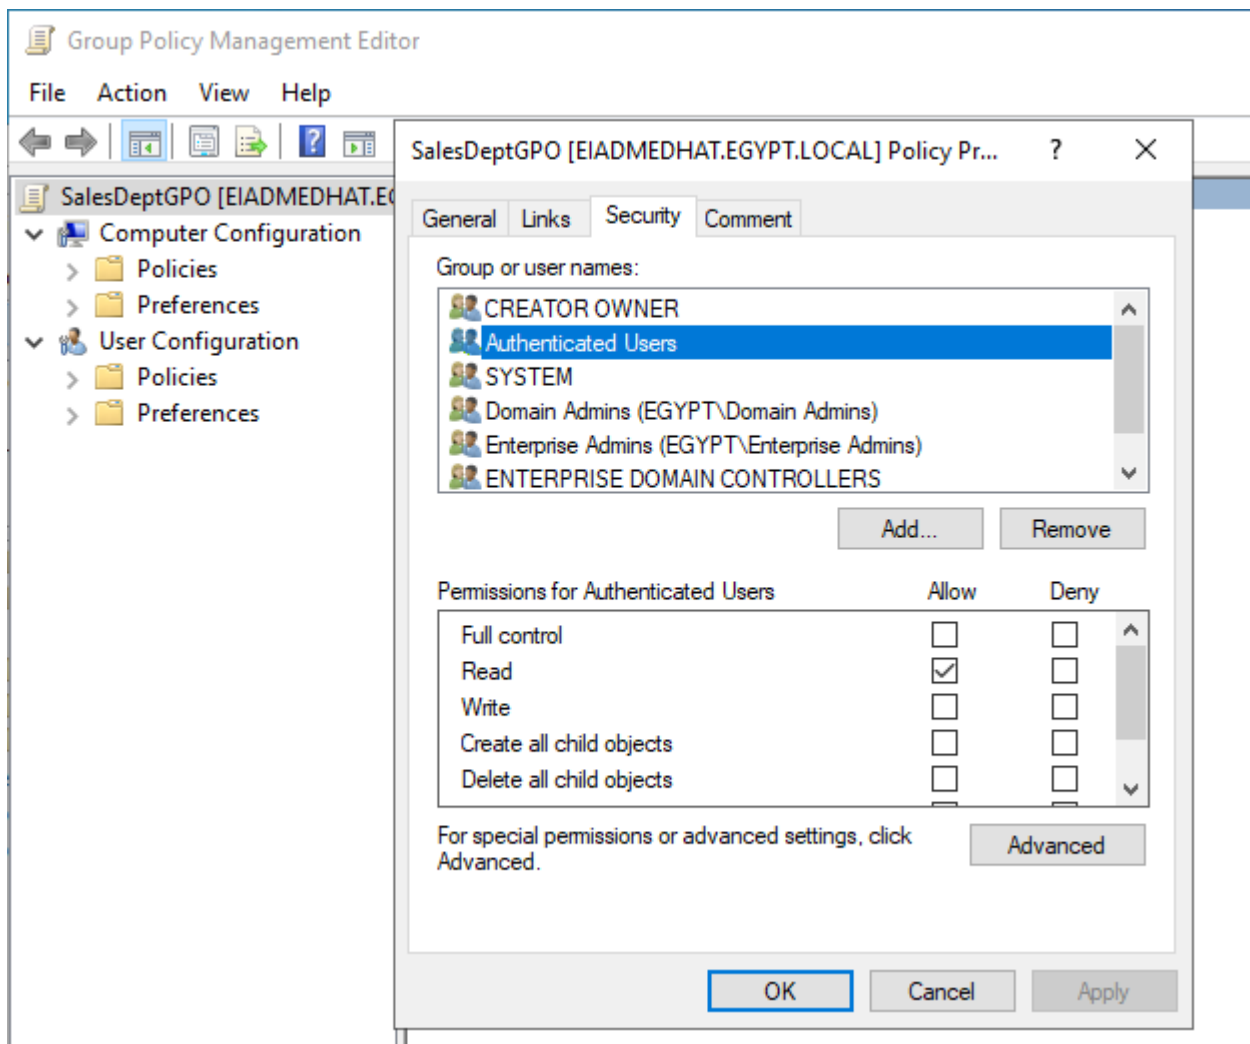

If you disable or do not configure this policy setting, the Documents icon is available from the Start menu.

Also, see the "Remove Documents icon on the desktop" policy setting.
